

Q-ra

The AI Caregiver Copilot

WhackHack

Why We Need Human + AI Co-Creation in Care

The Challenge:

- Rapidly aging population and limited care resources
- Overburdened caregivers with no personalized AI support
- Emotional loneliness and inconsistent care for patients
- Fragmented data between caregivers, doctors, and families

Our Vision:

- Combine human empathy + AI efficiency
- Use AI to organize tasks, monitor health, and support real-time communication
- Enable a system that amplifies human care through collaborative AI assistance
- Build a future where technology serves connection, not replaces it

Meet Q-ra — The AI Caregiver Co-Pilot

A web application that supports both caregivers and patients in real time.

Q-ra is designed to bridge the gap between human compassion and digital intelligence. It helps caregivers organize daily tasks, monitor patient well-being, and provide meaningful social interaction — all within one seamless platform.

“Amplify Care – Build the best care plan and connection, not just track it.”

Core Concept: Simulated AI with local data processing ensures that every action, note, and conversation stays private, secure, and completely under human control.

Core Features

Profiles

Personalized user and companion accounts

Task Planner

Smart daily scheduler for care routines

Note Analyzer

Turns care notes into organized insights

Emergency Network

Instant alerts to caregivers and contacts

Vitals Co-Pilot

Monitors key health and vital data

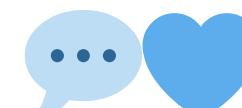

Live Consultation Hub

Doctor + AI co-pilot sessions in real time

AI Chatbot Assistant

Safe first-aid guidance and health info support

Digital Companion Match

Connects users with trusted social companions

Q-ra: Caring Beyond Treatment

Real-World Impact:

- Reduces loneliness through human-like companionship
- Offers empathetic mental-health conversations that calm and motivate
- Encourages healthy habits with reminders and emotional check-ins
- Supports caregivers by automating repetitive tracking tasks

Future Vision

- Adds voice & emotion recognition for deeper empathy
- Expands to multilingual and culturally adaptive communication
- Introduces AR/VR “virtual room” for immersive social support
- Builds a professional dashboard for doctors to review insights

“Q-ra connects hearts and health through Human + AI co-creation.”
